SUMMARY

Fresh graduate in D-IV Mechatronics Engineering Technology from Politeknik Negeri Jember with focus on industrial automation and hardware integration. Experienced in control panel wiring, control system installation, and computer vision-based object detection through internship and academic projects. Open to opportunities in industrial automation.

WORK EXPERIENCE

PT. Mokko Otomasi Indonesia, Gresik

Aug – Nov 2025

Internship

- Inspected cables on shrink tunnel machine control panels to ensure proper connection and system integrity.
- Surveyed dam sites under PERUM JASA TIRTA I and installed water level sensors for remote monitoring systems.
- Redesigned HMI interface at PT. Warnatama Cemerlang to improve system control and monitoring efficiency.

CV. Lab Persada, Lumajang (SMK Internship)

Jan – Apr 2019

Internship

- Diagnosed and repaired laptop hardware & software issues, including OS installation and device restoration.
- Performed field services including CCTV installation and hardware component assembly based on client requirements.

EDUCATION

Politeknik Negeri Jember

2022 – 2026

D-IV Mechatronics Engineering Technology

GPA: 3.72/ 4.00

PROJECTS

Final Project

2026

YOLOv11n Implementation on Raspberry Pi for Cacao Fruit Physical Condition Detection

- Collected, processed, and augmented image datasets (530 → 1,643 images) for object detection model training using Roboflow.
- Trained and evaluated YOLOv11n model achieving Precision 98.7%, Recall 99%, mAP50 99.4%, with 80% real-time success rate across 10 test scenarios.

IoT-Based Egg Incubator Prototype

2024

- Designed and developed an IoT monitoring system integrating sensors and microcontroller for real-time temperature and humidity control, maintaining stable incubation conditions.

SOFT SKILLS & TECHNICAL SKILLS

Soft Skills: Communication, Teamwork, Adaptability, Problem Solving, Analytical Thinking, Eager to Learn

Industrial Automation: Basic PLC Programming, HMI Design, Control System Installation, Panel Wiring & Assembly, Troubleshooting

Embedded Systems: Raspberry Pi, ESP32, Arduino, Sensor Integration, C/C++, Python

Software: Microsoft Office, Visual Studio, Canva, Factory I/O
